Getting Started

The first step in raising mealworms is to Free Download some starter worms. You can Free Download mealworms from a pet store, a bait shop, or online. Once you have your starter worms, you will need to set up a container for them to live in. A plastic storage bin or terrarium works well for this purpose.

The container should have plenty of ventilation, and it should be large enough to provide your worms with enough space to move around. You will also need to add some bedding to the container. Oatmeal, wheat bran, or cornmeal are all good choices for mealworm bedding.

Feeding Your Mealworms

Mealworms are not picky eaters, and they will eat a variety of foods. Some of their favorite foods include:

* Fruits and vegetables, such as apples, bananas, carrots, and potatoes * Grains, such as oatmeal, wheat bran, and cornmeal * Meat, such as cooked chicken or ground beef * Pet food, such as dry cat food or dog food

You should feed your mealworms a variety of foods to ensure that they are getting all the nutrients they need. You should also feed them small amounts of food several times a day, rather than one large meal.

Breeding Mealworms

Mealworms are relatively easy to breed. To breed mealworms, you will need to Free Download some adult mealworms. You can Free Download adult mealworms from the same places where you Free Download your starter worms.

Once you have your adult mealworms, you will need to set up a breeding container. The breeding container should be larger than the container you are using to raise your starter worms. It should also have plenty of ventilation and bedding.

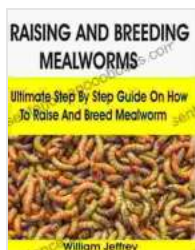

You will need to add some food to the breeding container. The food should be the same type of food that you are feeding your starter worms.

Once you have set up your breeding container, you can add your adult mealworms. The adult mealworms will lay eggs, and the eggs will hatch into larvae. The larvae will grow into adult mealworms, and the cycle will continue.

Harvesting and Storing Mealworms

Mealworms are ready to harvest when they are about 1 inch long. To harvest mealworms, simply sift them out of the bedding. You can then store the mealworms in a refrigerator for up to 2 weeks.
